DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, "it" on line 5 is unclear what "it" refers to.

In claim 2, "can be" on line 5, is passive and not a positive recitation.

In claim 3, "or" on line 3 is unclear whether the preceding element is claimed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin (US 5,727,726) in view of Obergfell et al. (US 3,615,049).

Lin discloses a box nailing machine comprising: a body (10) having driving port (11) a handle portion having a handle arm (12, fig. 3); a magazine (20) attached to the handle portion via the handle arm; a handle arm attaching portion (24) for attaching the magazine to the handle; an opening portion (slot, fig. 3) into which a fixing bolt (40) is

Art Unit: 3721

inserted to secure the magazine and a washer (see washer adjacent bolt 40). Lin shows the handle arm attaching portion protruded towards the handle arm (see fig. 3). Lin further shows protruding size the handle arm attaching portion is deemed equal height of a head portion of the fixing bolt (see fig. 3).

Although Lin discloses washer, not integrally formed in the handle arm attaching portion, but provides support to the fixing bolt, therefore it would have been obvious to one skilled in art to integrally form Lin's washer in the handle arm attaching portion, to provide support to the fixing bolt.

Lin is silent about the magazine composition. Obergfell et al. teaches a magazine (56) made of metal (col. 7, line 37). In view of the teachings of Obergfell et al. it would have been obvious to one skilled in art to provide the Lin with magazine made of metal in order to hold and support fasteners.
